

Linear CEO Welcomes WA Parliamentary Inquiry Report on Health and Medical Research

Linear CEO Jayden Rogers has praised the release of the Western Australian Government's Parliamentary Inquiry Report, *In the Test Tube: Finding WA's Formula for Health and Medical Research Success*.

"The report shows the State Government's commitment to supporting world-class medical research while offering a comprehensive assessment of the unique challenges in Western Australia," Rogers stated. "As WA's leading for-purpose clinical trial provider, Linear welcomes our opportunity to help implement the many sensible and practical recommendations made by the inquiry."

Linear is particularly pleased with Recommendation 14, which highlights the critical role of clinical trials in advancing medical research. The recommendation urges the WA Government to increase funding to clinical trial sites to align with the level of support currently provided in other states.

"The inquiry rightly underscores the importance of enhancing clinical trial capacity as part of WA's broader medical research ecosystem," Rogers said. "Increased infrastructure for clinical trials not only improves patient access to leading new medicines and treatments, it also helps local researchers increase their chances of securing national research funding."

The report further emphasises the need for robust clinical trial facilities, with the committee noting that *'Infrastructure and clinical trials facilities are key.'*

In addition to addressing clinical trial capacity, Linear welcomes the report's focus on initiatives to:

- Support WA researchers in securing a fair share of national research funding.
- Attract international talent to the region.
- Leverage emerging opportunities in genomics and precision medicine.

"Medical research has the power to transform lives, both in WA and globally," Rogers concluded. "With WA already home to some of the world's brightest minds and most innovative researchers, we strongly encourage all stakeholders to review the report and collaborate with the Government to maximise this potential."
